$$\omega_{max} = 0.47$$

mixed core

# $\Delta\rho$ in Core calculations

<i>Cores</i>	<i>pitch</i> ( <i>cm</i> )	$C^{J22} - E$ ( <i>pcm</i> *)	$C^{J31} - E$ ( <i>pcm</i> *)
<i>UH1.2</i>	1.26	+375	+225
<i>MISTRAL1</i>	1.32	+150	+140
<i>MISTRAL2</i>	1.32	+420	+650
<i>MISTRAL3</i>	1.39	+470	+740
<i>MH1.2</i>	1.26	+160	+280

$$\omega_{\text{mix}} = 0.47$$

mixed core

The UOX Reactivity seems to be slightly overestimated.  
The MOX Reactivity is overestimated, but in Mixed core, the effect is not so important.

\* statistical uncertainty in core calculation :  $1\sigma \approx 20 \text{ pcm}$

## ***Isotopic Components from J22 to J31 in M2 MOX core***

---

- Effect of  $H_2O$  :  $(+220 \pm 30)$  pcm (partly due to processing)

## ***Isotopic Components from J22 to J31 in M2 MOX core***

---

- Effect of  $H_2O$  :  $(+220 \pm 30) pcm$  (partly due to processing)
- Effect of  $Zr$  :  $(-80 \pm 20) pcm$

## ***Isotopic Components from J22 to J31 in M2 MOX core***

---

- Effect of  $H_2O$  :  $(+220 \pm 30)$  pcm (partly due to processing)
- Effect of  $Zr$  :  $(-80 \pm 20)$  pcm
- Effect of  $^{241}Am$  :  $(-280 \pm 30)$  pcm

## Isotopic Components from J22 to J31 in M2 MOX core

---

- Effect of  $H_2O$  :  $(+220 \pm 30)$  pcm (partly due to processing)
- Effect of  $Zr$  :  $(-80 \pm 20)$  pcm
- Effect of  $^{241}Am$  :  $(-280 \pm 30)$  pcm
- Effect of  $^{241}Pu$  :  $(-170 \pm 30)$  pcm

## Isotopic Components from J22 to J31 in M2 MOX core

---

- Effect of  $H_2O$  :  $(+220 \pm 30)$  pcm (partly due to processing)
- Effect of  $Zr$  :  $(-80 \pm 20)$  pcm
- Effect of  $^{241}Am$  :  $(-280 \pm 30)$  pcm
- Effect of  $^{241}Pu$  :  $(-170 \pm 30)$  pcm
- Effect of  $^{238}U$  (APOLLO2/CEA2005 calc.) :  
+230 pcm due to  $k_\infty$  (+120 from  $\sigma(n, \gamma)$  ; +70 from  $\nu$  ...)

## Isotopic Components from J22 to J31 in M2 MOX core

---

- Effect of  $H_2O$  :  $(+220 \pm 30)$  pcm (partly due to processing)
- Effect of  $Zr$  :  $(-80 \pm 20)$  pcm
- Effect of  $^{241}Am$  :  $(-280 \pm 30)$  pcm
- Effect of  $^{241}Pu$  :  $(-170 \pm 30)$  pcm
- Effect of  $^{238}U$  (APOLLO2/CEA2005 calc.) :  
+230 pcm due to  $k_\infty$  (+120 from  $\sigma(n, \gamma)$  ; +70 from  $\nu$  ...)
- Effect of  $^{240}Pu$  (APOLLO2/CEA2005 calc.) : +150 pcm

## Isotopic Components from J22 to J31 in M2 MOX core

---

- Effect of  $H_2O$  :  $(+220 \pm 30)$  pcm (partly due to processing)
- Effect of  $Zr$  :  $(-80 \pm 20)$  pcm
- Effect of  $^{241}Am$  :  $(-280 \pm 30)$  pcm
- Effect of  $^{241}Pu$  :  $(-170 \pm 30)$  pcm
- Effect of  $^{238}U$  (APOLLO2/CEA2005 calc.) :  
+230 pcm due to  $k_\infty$  (+120 from  $\sigma(n, \gamma)$  ; +70 from  $\nu$  ...)
- Effect of  $^{240}Pu$  (APOLLO2/CEA2005 calc.) : +150 pcm
- Effect of  $^{239}Pu$  (APOLLO2/CEA2005 calc.) : +160 pcm

N.B: decrease by 1% of migration area  $M^2 = D/\Sigma_a \rightarrow +180\text{pcm}$  partly due to  $g(E, E', \mu)_{inel}^{U238}$

- The JEF-2.2  $\rightarrow$  JEFF-3.1 is not only a library effect (in the nuclear data point of view) but also a nuclear data processing effect.

- The JEF-2.2  $\rightarrow$  JEFF-3.1 is not only a library effect (in the nuclear data point of view) but also a nuclear data processing effect.
- Final JEFF-3.1 values comparable between APOLLO2 (not presented here) and TRIPOLI4.

- The JEF-2.2  $\rightarrow$  JEFF-3.1 is not only a library effect (in the nuclear data point of view) but also a nuclear data processing effect.
- Final JEFF-3.1 values comparable between APOLLO2 (not presented here) and TRIPOLI4.
- In EOLE PWR-UOX mock-ups, the reactivity seems to be slightly overestimated.

- The JEF-2.2  $\rightarrow$  JEFF-3.1 is not only a library effect (in the nuclear data point of view) but also a nuclear data processing effect.
- Final JEFF-3.1 values comparable between APOLLO2 (not presented here) and TRIPOLI4.
- In EOLE PWR-UOX mock-ups, the reactivity seems to be slightly overestimated.
- 100% MOX core experiments point out a  $+700$  pcm reactivity overestimation.

- The JEF-2.2  $\rightarrow$  JEFF-3.1 is not only a library effect (in the nuclear data point of view) but also a nuclear data processing effect.
- Final JEFF-3.1 values comparable between APOLLO2 (not presented here) and TRIPOLI4.
- In EOLE PWR-UOX mock-ups, the reactivity seems to be slightly overestimated.
- 100% MOX core experiments point out a  $+700$  pcm reactivity overestimation.
- MH1.2 Experiment shows that the reactivity of LWR mixed-core loading is reasonably predicted using JEFF-3.1 library.
