

# Radiological characterisation by means of 3D- laser modelling and positioning of measurements

*AB SVAFO*

*MultiInfo 3D Laser Scan Solution AB*

## Field work:

### **GPS measuring:**

- 4 points
- Coordinate system:  
Sveref99 (X-Y), RH00 (Z)

### **Reference surveying with TS:**

- 275

### **Laser scanning:**

- 108

# Pre-processing:

Register all scans into the same coordinate system as a point cloud

# Modelling:

**Create 3D CAD model**

**Create 3D laser image**

**Link 3D CAD model and 3D laser image**

# Modelling:

Create 3D CAD model from point clouds

## Potential possibility:

3D measurement in point clouds and 3D model

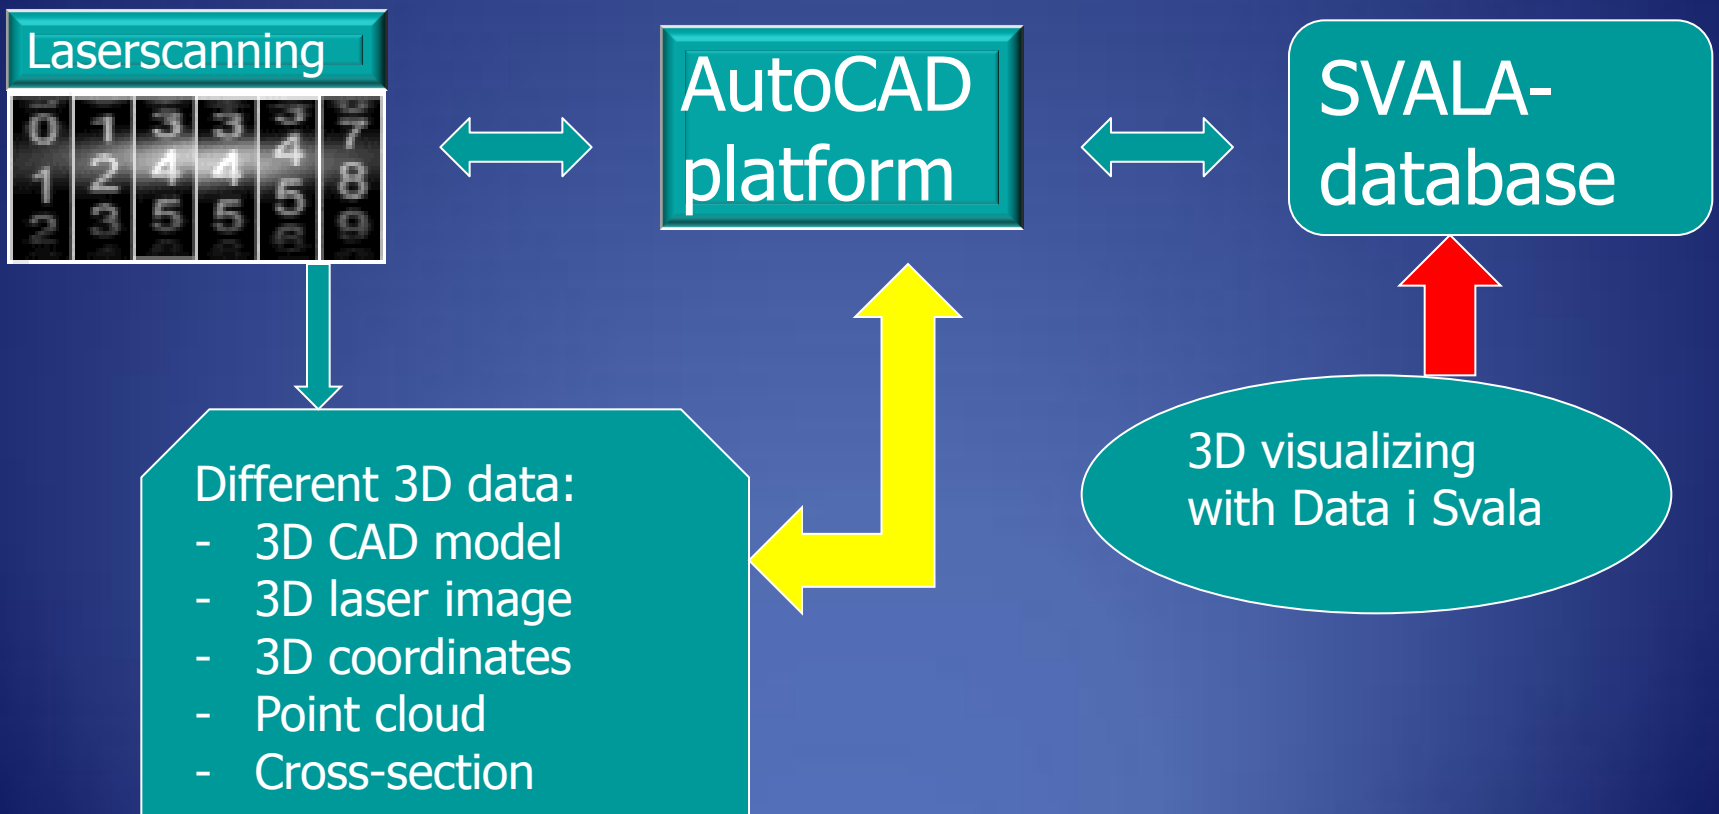

Object Info	Value
Name	pipe10
Type	CYLINDER
Diameter	0.6000 m
Length	10.1061 m
Direction X	-0.6042
Y	0.7969
Z	0.0035
Start X	114580.6463
Y	6517539.0524
Z	18.5403
End X	114574.5406
Y	6517547.1056
Z	18.5758
Transform	Yes
	World Frame

# 3D visualisation of radiological measurement:

Different methods for 3D visualization of radiation measurements:

1) Classify radioactivity level with colour for different rooms

2) Capture position data (x-y-z) from laser scanning, and 3D visualization of radioation measurement with different symbols

- Different types of symbols represent different types of measuring methods
- Size of the symbol represent radiation levels
- Colour of the symbol represent different measuring time

## Different measuring methods:

- 1) Drilling samples
- 2) Grab samples
- 3) Smear samples

# Trend surface analysis of radioactivity level for whole floor

Ideas about classification of radioactivity measurements:

- 1) Classify radioactivity level for different objects, e.g. ventilation, drains, rooms.
- 2) Classify measuring data of alpha-, beta- and gamma radiation with different radioactivity levels
- 3) Different radioactivity levels corresponding to different colours

Capture position data (x-y-z) from laser scanning:

- 1) If RFID-tags can be identified, the position data are captured from laser scanning data
- 2) If no tags are used, but position description is available, e.g. on the ground, distances from the door and above the floor.

# Visualization of gamma measurements:
